

Biogasclean ECO - biological removal of H₂S from biogas

**BIO
GASCLEAN**

the key to efficient
and successful
utilization of biogas

Key features of **Biogasclean ECO**:

- **Easy to ship worldwide;** the gas cleaner can be loaded on a truck or shipped worldwide in one forty feet container.
- **The PTU** – the Process Technique Unit - is the machine room and contains PLC controller board, circulation pump, air blower, valves, flow meters and – if required – heating system installed in a small custom built fiberglass container.
- **The scrubber tank** is manufactured in high quality fiberglass and supplied with a grating so it is possible to inspect the tank underneath the packing media. The tank is supplied with **ladder and handrail**.
- **The packing media** is manufactured in plastic and can be cleaned inside the tank. This will reduce downtime and increase revenues.
- **Safety;** injection of air into biogas is only safe with a reliable control system. The PLC receives signals from an oxygen meter and will reduce or stop air injection in case the oxygen content in the clean gas gets too high. If the PTU is enclosed, the safety system will remove the ignition source by cutting the power supply in case the gas detector should measure above 25% of the Lower Explosive Level (LEL).

Plant: Sika Farm
Philippines

Capacity: 250 m³/h
2,500 ppm H₂S

Plant: Sanut Dominicana
Dominican Republic

Capacity: 230 m³/h
1,700 ppm H₂S

- **Automatic operation;** the system is automatically controlled by the PLC controller board which reduces the risk for manual errors and operation problems. The main function is to provide safe, optimal and stable conditions for the biological process. The signals can be made available in the control room.
- **Low operating costs;** the system uses no chemicals and has very low electrical consumption. In many projects we use treated water from an anaerobic digester or an aeration pond as scrubber liquid and nutrient source. This is cheaper than soft water and industrial fertilizer.
- **Guaranteed performance;** we provide performance guarantees on all projects.

Biogasclean A/S

Biogasclean is specialized in biological desulfurization of biogas without the use of chemicals. We develop, manufacture and supply fully automated gas cleaning systems for H₂S removal combining low operating costs with high availability. Our track record comprises mid 2018 more than 235 plants in operation or under construction in 40 countries. Biogasclean supplies clean gas to more than 540 MW gas engines and boilers and removes sulfur from biogas upgrading units.
